- English
- Bengali

ABOUT ME

I am a self-taught passionate web designer specializing in HTML, CSS, Bootstrap and JavaScript. I can convert a Figma design or a PSD design into a responsive web template using HTML, CSS, Bootstrap and JS. I can develop the backend of an application using PHP and MySQL database.

PROJECTS

Academic Thesis/Project Information Registry

This project is mainly for a university to register their student's academic thesis/project information. In this project, I used HTML, CSS and JS for front-end design. On the backend, I used PHP and MySQL. I used JQuary for front-end functionality and **'PhpSpreadsheet'** for student data entry from Excel files.
